

It all started with a simple question.

Could a well-designed ergonomic chair enhance concentration and learning in the classroom?

We visited classrooms throughout New Zealand, measured 20,000 students and studied their behaviours in classrooms. By the end of that extensive research, we found that most school chairs inhibited movement and restricted blood flow, resulting in unproductive fidgeting and off-task time.

So, we designed the **Bodyfurn® chair**, the world's first dynamic seating solution, helping students learn in comfort, in classrooms around the world.

Fast forward to today, and we're still challenging ourselves on how we can further enhance and advance our product designs.

An evolution of the original, we are proud to introduce **Bodyfurn.Flex**. Sustainably designed and made with 92% post-consumer recycled materials, Bodyfurn.Flex has been created with an enhanced level of supported movement for senior students and adults.

The elegant, flowing curves, patterns and subtle colourways of the new range are all inspired by nature's beauty and symmetry. Bodyfurn Flex brings an easy sophistication and contemporary style to all educational areas, from learning to administration spaces.

Bodyfurn.Flex

Dynamic by nature

Designed for active movement in the learning and working environment

furnware

There's a special energy in learning spaces and we've created a naturally dynamic chair to enhance it and move with it.

Bodyfurn.Flex is a stunning new chair that builds on our proven, pioneering ergonomics that changed learning spaces for tens of thousands of students over the years. Promoting active movement and contoured for comfort and support, it's ideal for senior learning and working environments.

Empathetically designed

With empathy incorporated into the design process, Bodyfurn.Flex offers meaningful, inclusive and human-centred user experiences. Leaning in to concentrate, stretching back to listen, turning to share and collaborate - every instinctive movement is naturally supported for greater comfort and concentration.

Sustainable design

We're committed to limiting our impact on the planet and leading the industry in a sustainable future. Bodyfurn.Flex is created from 92% post-consumer recycled materials and our improved design allows for in-market assembly, reducing our shipping carbon footprint.
